CLAIMS

- 1. Detergent and conditioning compositions, characterized in that it comprises, in a cosmetically acceptable medium, (A) a washing base and (B) a conditioning system comprising at least one cationic polymer and at least one amine-comprising silicone with a weight-average molecular mass of between 11,000 and 25,000.
- 2. Composition according to Claim 1, characterized in that the said washing base comprises one or more surfactants chosen from anionic, amphoteric, non-ionic, zwitterionic and cationic surfactants and their mixtures.
- 3. Composition according to either one of Claims 1 and 2, characterized in that the said washing base is present at a content by weight of between 4% and 50% with respect to the total weight of the composition.
- 20 4. Composition according to Claim 3, characterized in that the said content is between 8% and 35%.
- 5. Composition according to Claim 4, characterized in that the said content is between 10% 25 to 25%.
 - 6. Composition according to any one of the preceding claims, characterized in that the said

cationic polymer is present at a content by weight of between 0.001% and 10% with respect to the total weight of the composition.

- 7. Composition according to any one of the preceding claims, characterized in that the amine-comprising silicone is chosen from:
 - (a) polysiloxanes called "amodimethicone" in the CTFA dictionary (4th ed., 1991) and corresponding to the formula:

in which x' and y' are integers which depend on the weight-average molecular mass, such that the said molecular mass is between 11,000 and 25,000,

(b) polysilloxanes called "amodimethicone" in the CTFA dictionary (7th ed., 1997) and corresponding to the formula:

10

$$R = \begin{bmatrix} CH_{3} & & & & \\ & & & \\ Si & & & \\ CH_{3} & & & \\ & & & \\ CH_{3} & & & \\ & &$$

in which R denotes OH or methyl,
the weight-average molecular mass being between 11,000
and 25,000.

- 5 8. Composition according to any one of the preceding claims, characterized in that the said amine-comprising silicone is present in the form of an emulsion.
- 9. Composition according to any one of the 10 preceding claims, characterized in that the said amine-comprising silicone is present at a content by weight of between 0.05% and 10% with respect to the total weight of the composition.
- 10. Composition according to any one of the preceding claims, characterized in that the said cationic polymer is chosen from quaternary cellulose ether derivatives, cyclopolymers, cationic polysaccharides and their mixtures.
- 11. Composition according to Claim 10,
 20 characterized in that the said cyclopolymer is chosen
 from homopolymers of diallyldimethylammonium chloride

15

and copolymers of diallyldimethylammonium chloride and of acrylamide.

- 12. Composition according to Claim 10, characterized in that the said quaternary cellulose ether derivatives are chosen from hydroxyethylcelluloses which have reacted with an epoxide substituted by a trimethylammonium group.
- 13. Composition according to Claim 10, characterized in that the said cationic polysaccharides

 10 are chosen from guar gums modified by a 2,3epoxypropyltrimethylammonium salt.
 - 14. Composition according to any one of the preceding claims, characterized in that it exhibits a pH of between 3 and 10.
 - one of the preceding claims for cleaning and/or conditioning the hair.
- 16. Process for washing and for conditioning keratinous substances, such as the hair, which consists in applying, to the said wetted substances, an effective amount of a composition as defined in any one of Claims 1 to 14 and in then rinsing with water, after an optional period of rest.
